

TEST PRIVÉE

Scientifically tested acoustic comfort

Real acoustic comfort has a new name: Privée. 60% of the waves reflected in highly-reverberant environments come from the ceiling. This is why Privée features a high back and sides, but especially a “Canopy” which enhances its performance.

Total acoustic comfort to hold a clearly understood conversation with more than 15 dB of noise reduction for frequencies between 500 Hz and 2,000 Hz.

Sound Intensity Test conducted on 20/01/2014 at Z Lab S.r.l. Cerea (VR)

VARIOUS FREQUENCIES
