

PEEL REGIONAL POLICE

THE EVOLUTION OF FIXED SEATING

At Borgo, excellence in fixed seating is defined as enhancing the user experience in every possible way. This begins with innovation in safety and comfort, which lead to helping customers create a space that strengthens the benefits for users.

When the Peel Regional Police approached Borgo, it was important that all the unique needs could be met without compromise. A space was being designed as a training facility that could also be adapted into a

crisis center in case of an emergency. Another concern is that when a police officer is on duty, their belts can pose problems for many furniture solutions. As the belts are wide, bulky, and often cause damage to furniture, durability of the product is a main concern. Since the space is a training area, large table surfaces are also required at times for taking notes and debriefing.

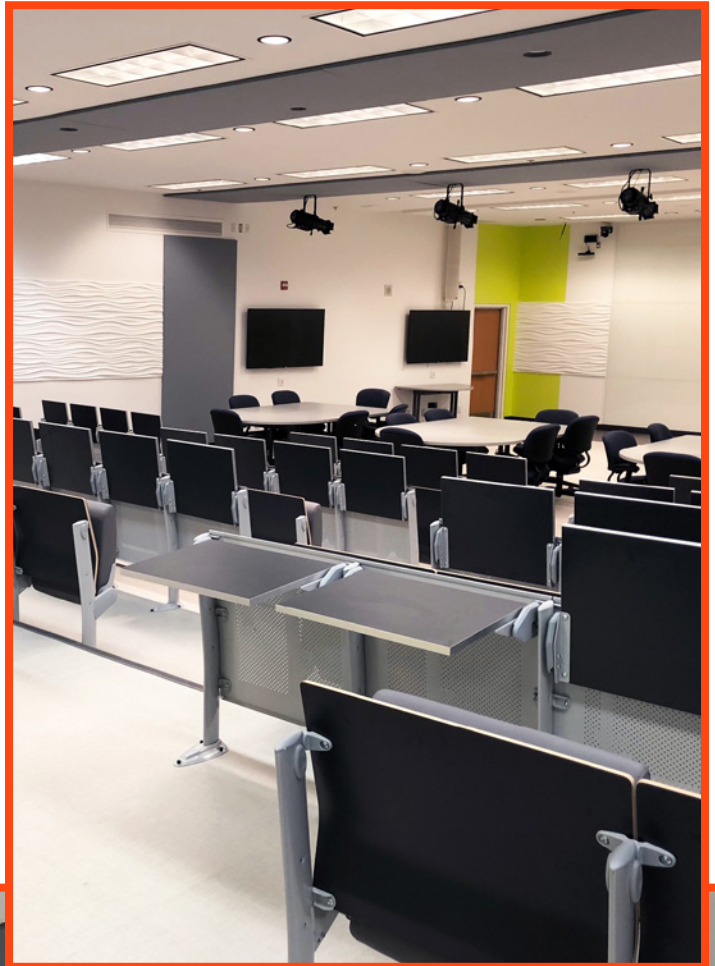

This style of auditorium seating was designed without arms, minimizing the chances of duty belts being caught in the furniture. The armless design also allowed for wider seats so that an officer can sit comfortably. No detail is left out, and all the details have been carefully studied from the perfected Anti-Panic tables, to the new design of the foot for anchoring to the floor. The true Anti-Panic design, which is like nothing on the market, was once limited to straight rows; however, this is no longer the case. Lecture Halls and Auditoriums with curved layouts can now be accommodated by placing the Anti-Panic tables on an aluminum track. This allows for the tables to be placed in the correct position without compromising the fluid mechanism that is activated in case of an emergency.

Large Anti-Panic tables were fitted in front of the seats to allow for a space where a notepad or laptop, and even a coffee, can be placed comfortably. If any space were to understand the importance of time and emergencies, a police center would be it. The Anti-Panic tables are specifically designed for times of distress; when in the open position the slight pressure of an individual body standing up on the table will fluidly have the table flip-up and stow-away, allowing easy and quick access out of the seating.

Omnia Evolution is predominately made of metal, laminate, and upholstered in polyurethane, making maintenance and cleaning easy. Designed with interchangeable parts makes any needed repairs quick and easy.

CASE STUDY - OMNIA EVOLUTION - PEEL REGIONAL POLICE

Borgo's Omnia Evolution was the perfect solution for the environment. The Omnia Evolution is designed off of the success of Omnia, Borgo's most popular fixed seating solution. The Omnia Evolution offers unsurpassed modularity with maximum functionality for limited spaces. Thanks to the Omnia Evolution's numerous combinations, customization without borders and the modern and essential design is combined with functionality without compromise. The Omnia Evolution, designed by Giovanni Baccolini, was created to adapt perfectly to spaces on steps. The new vertical structure is designed to accommodate various heights of steps, while maintaining optimal posture and lumbar support.
